ABOUT

Omega-Boost is from fish that are wild-caught. The oil is molecularly distilled and assayed for heavy metals.

The omega-3 fatty acids are important to health, especially for the heart, brain and cell membranes of the body. *

The omega-3 fatty acids, Eicosapentaenoic Acid (EPA) and Docosahexaenoic Acid (DHA) are precursors to the PGE3 series of prostaglandins, which are substances important to proper body regulation.*

Populations such as the Eskimo and Japanese who consume an oily fish diet rich in natural marine

lipids

show a strikingly low incidence of heart disease, in spite of their high fat consumption.*

It is an easy-to-swallow enteric coated softgel that contains EPA and DHA.*
